TECHNICAL SKILLS

Languages: Go , Java, Python, SQL

Cloud & Orchestration: Kubernetes (Internal API, Operators), Docker, Terraform, Ansible

Distributed Systems: Istio (Service Mesh), Longhorn (Distributed Storage), OpenTelemetry (Tracing)

DevOps/SRE: GitOps (ArgoCD), LGTM Stack (Prometheus, Grafana, Loki, Tempo), Cloud-Native Monitoring, CI/CD Pipelines

PROFESSIONAL EXPERIENCE

CAE

Montreal, QC

Cloud & DevOps Intern (Container Platform Team)

March 2026 – June 2026

- Selected for a competitive 12-week graduation internship to support CAE's enterprise-scale Kubernetes infrastructure.
- Focusing on automating CI/CD pipelines and enhancing cloud-native observability for mission-critical training systems.

Kleff Hosting | kleff.io

Montreal, QC

Backend & Platform Developer — Contract

July 2025 – Present

- Architected a consumer-facing PaaS, overseeing the deployment of 10+ **Go/Java** microservices.
- Developed a **Custom Kubernetes Operator** in Go to manage one-click-deploy lifecycle; implemented custom CRDs that automate the reconciliation of resources for application users.
- Implemented an SRE-driven observability strategy using the **LGTM stack** to monitor SLIs/SLOs, maintaining a **99.9% availability** target during beta testing.
- Deployed the cluster and automated the platform lifecycle via **GitOps (ArgoCD)**, achieving 100% declarative infrastructure and application state.

PROJECTS

Distributed Observability Lab

Oct. 2025 – Present

LGTM Stack (Loki, Grafana, Tempo, Prometheus)

- Deployed and configured the full **LGTM stack** to establish a centralized observability platform for monitoring containerized microservices.
- Designed comprehensive **Grafana dashboards** to visualize the **Four Golden Signals** (Latency, Traffic, Errors, Saturation), providing real-time visibility into cluster performance.
- Integrated **Prometheus** metrics and **Loki** log aggregation to correlate system telemetry, significantly reducing time spent on root-cause analysis during service degradations.

Automated Bare-Metal Cloud | [GitHub](https://github.com)

July 2025 – Present

Terraform, Proxmox, K3s, Longhorn, ESO

- Utilized **ArgoCD** to provision a High-Availability K3s cluster on Proxmox, treating hardware-as-code.
- Implemented **Longhorn distributed storage** with automated backup policies, achieving persistent volume failover across nodes.
- Centralized identity and access management (IAM) by deploying **Authentik**, providing **OIDC SSO** for all self-hosted tools.
- Hardened platform security by integrating Doppler with **External Secrets Operator**, ensuring **zero secrets** are stored in plaintext within GitOps repositories.

EDUCATION

Champlain College Saint-Lambert

Saint-Lambert, QC

Diploma of College Studies (DEC) in Computer Science

Aug. 2023 – June 2026

HACKATHONS & ACHIEVEMENTS

Vanier College CTF – 1st Place (Tie)

2024

Security, Reverse Engineering

Champlain College Hackathon – 1st Place

2024

PyTorch, Neural Networks, Computer Vision
